SUMMARY

I am a curious person. Educated in Physics (BSc), with an Honours degree in Astronomy and Astrophysics. Original, and independent research experience in the field of galaxy evolution, with a first-author paper in preparation. Leadership experience within a multidisciplinary space-mission project. I'm comfortable applying my technical foundation to unfamiliar roles and disciplines, and communicating ideas clearly to both expert and non-expert audiences.

EDUCATION

- **The Australian National University** Acton, ACT
Bachelor of Science (Honours): Astronomy and Astrophysics Jul 2024 – Nov 2025
- **The University of Melbourne** Parkville, VIC
Bachelor of Science: Physics Mar 2020 – Jul 2023

EXPERIENCE

- **Research School of Astronomy & Astrophysics (ANU)** Weston, ACT
Astronomer Jul 2024 – Nov 2025
 - Original, independent, and sustained research in the field of galaxy evolution.
 - Collaborated with world renowned academic professionals to inform current and future work.
 - Preparing a first-author publication for submission to the *Monthly Notices of the Royal Astronomical Society* (MNRAS).
- **Milo Mission Academy (AROSE)** Remote, AUS
Lead Scientist — Professional Development Internship Jan 2024 – Jul 2024
 - Directed the science narrative of proposed Lunar mission, aligned with stakeholder requirements, and NASA Artemis science goals.
 - Multidisciplinary collaboration across a team of 15 students/professionals within scientific, systems engineering, and programmatic roles.
 - Significant contribution to major milestone deliverables, including 200+ page Preliminary Design Review.
- **Psarakos Market** Thornbury, VIC
Sales Assistant Dec 2018 – Jul 2024
 - Regular fulfilment of stock-take and inventory distribution to secondary store.
 - Training and up-skilling of new team members.

PROJECTS

- **On the Molecular Gas Fractions of Early-Type Galaxies at $z \sim 0.3$ from the MAGPI Survey**
Honours Thesis Project — Supervisor: A/Prof. Emily Wisnioski
 - Interdisciplinary project focused at the intersection of astrophysics, data science, and scientific programming.
 - Analysed and synthesised data between the world's most powerful radio telescope array (ALMA), and one of the world's most advanced optical telescopes (VLT)
 - Provided original constraints on the evolution of the molecular gas content and star-forming properties of galaxies at a previously unexplored cosmic epoch.
- **The Shadowed Polar Ice Discovery and Exploration Rover (SPIDER)**
Formulation of a Lunar Rover Concept
 - Derived vehicle science-subsystem requirements, providing constraints for engineering.
 - Defined a mission-ready instrument suite, satisfying requirements, and aligning with mission objectives.
 - Coordinated across a multidisciplinary team to define and implement risk mitigation strategies.

SKILLS

- **Programming:** Python, Git, Linux/WSL, MATLAB
- **Tools & Platforms:** LaTeX, Microsoft Office
